

COMMERCIAL INSTALLATION

This church in Arlington, Texas has 5 Super Cyclone solar powered fans providing ventilation for the sanctuary and the adjacent attic storage areas. The building is used extensively in the evenings throughout the week and as one might suspect, religiously every Sunday without exception. The usage hasn't changed in over ten years, but the cost of electricity sure has. The average rate of consumption per month is now **2000 kw.** less then it once was.

The Holbrook hotel in southern California has 6 fans and their business offices right below this roof. **Claim to have cut their office's AC expenses literally in half!**

This small dentist's office has virtually no attic space to speak of. The whole building has a dropped ceiling with suspended a/c. In spite of being a brand new building, the Air conditioning could not keep up. Three fans for this 4500 square feet of roofing did the job.
Savings = over \$300.00 per month in AC costs
